 - In Claim 9, lines 6-7 **replace** "...for causing the to provide..."
with
"...for causing the computer to provide..."
 - In Claim 9, lines 11-12 **replace** "...fourth computer readable program code for causing the computer to output an output data stream containing a plurality of valid bits of the input signal at the desired output frequency; and..."
with

“...fourth computer readable program code for causing the computer to shift the valid signal by the predetermined number; and”.

- In Claim 9, lines 13-14 **replace** “...fifth computer readable program code for causing the computer to shift the valid signal by the predetermined number.”

with

“...fifth computer readable program code for causing the computer to output an output data stream containing a plurality of shifted valid bits of the input signal at the desired output frequency.”.

- In Claim 10, lines 1-2 **replace** “...wherein the fourth computer readable program code...”

with

“...wherein the fifth computer readable program code...”

- **Cancel Claim 12.**

- In Claim 15, lines 10-11 **replace** “...outputting an output data stream containing a plurality of the valid bits of the input signal at the desired output frequency.”

Allowable Subject Matter

Art Unit: 2611

4. Claims 1-2, 5-10, 13-16 & 18-20 and re-numbered as claims 1-15 respectively are allowable over the prior art of record because the cited references do not contain the specified limitation of a circuit having: an input for receiving an input signal containing a plurality of bits at an input frequency and for receiving a representation of desired output frequency; a splitter, which splits the input signal into a plurality of split signals each at a frequency of the desired output frequency; a plurality of catchers, wherein each catcher provides bits of a respective split signal and a valid signal identifying bits of the respective split signal that are valid; a first shifter, which shifts valid bits of the respective split signal that are identified by at least some of the catchers by a predetermined number, and a second shifter, which shifts the valid signal identified by at least some of the catchers by the predetermined number; and an output responsive to the shifted valid bits to provide an output signal containing a plurality of valid bits of the input signal at the desired output frequency.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sudhanshu C. Pathak whose telephone number is (571)-272-3038. The examiner can normally be reached on M-F: 9am-6pm.
